If you are a beginner guitarist, don't feel intimidated by the fact that exist many different fingerings: you only need to know a few major and minor chords to start playing your favorite songs and have fun with your friends. If you want to go a step further, you could learn some Dominant Chords , that give to your sound a bluesy feel , and you'll be all set for entertaining your audience. Here are the chord types that you'll find in the free ebook Major Minor Dominant 7 Maj7 Min7 Dim Sus4 m6 m6/9 7b5 m7b5 7#5 7b9 7#9 m9 maj9 9 11 13 Major chords have a bright and happy sound . They are composed of the Root, the Major Third and the Fifth. Of course, you don't have to know chords theory to play these chords, just learn the shapes and start rocking! C Major D Major E Major F Major G Major A Major B Major Fretboard Orientation In the chart, the fretboard is shown vertically , with the thickest string (E low string) on the left. Again on the left, you find the frets number (if there are no frets number, that means that the chord is fretted in open position , near the headstock). Open or Muted Strings (X or 0) At the top of the diagrams, the string could have an X or a 0 . The X tells you to mute the string, while the 0 tells you to play open, without pressing any fret. Fingering The numbers on the frets, surrounded by a black dot , show you the finger to use: 1 index, 2 medium, 3 ring, 4 pinky. Notes Names and Intervals At the bottom of the diagrams, you find the note names and the intervals (you can safely ignore this information if you only want to know the fingering for a chord) Learn more by visiting the how to read chord diagrams tutorial On the contrary, minor chords have a sad and melancholy sound . They are used a lot in love and romantic songs, for the particular feeling they create. A minor chord is composed of the Root, the Minor Third and the Perfect Fifth. C Minor D Minor E Minor F Minor G Minor A Minor B Minor A dominant seventh chord is composed by the Root, the Major Third, Perfect Fifth and the Minor Seventh. Blues progressions use dominant chords all the time, for example, try this basic blues progression : C7 | C7 | F7 | G7. C7 D7 E7 F7 G7 A7 B7 Movable chords are shapes that you can shift up or down the neck (without changing finger positions) to play chords with different names (C, D, E, F#, and so forth) but of the same type (Major, Minor, 7, and, minor, dominant or other types). That's the reason we call these diagrams movable. With movable shapes, we don't play any open strings. If you memorize these fingerings, you'll be able to play almost any chord , by placing the movable shape at the fret that corresponds to the root of the chord you want to play. In the diagrams, the root note is the one denoted by the number 1 at the bottom of the diagrams. For example, a movable shape for the Dominant Seventh chord is the following: C7 Movable D7 Movable E7 Movable The first diagram shows you the fingering of a C7 chord , that has the lower root at the 3rd fret of the A string. If you want to play a D7 chord , you have to shift the shape up by two frets, until the root (the fret with the number 1 at the bottom of the chart) is at the 5th fret of the A string, that is a D, as shown in the second chart. With the same logic, if you want to play a E7 chord , you have to move the shape until the root at the 7th fret of the A string (which is an E), as shown in the third picture. In movable chord diagrams you will not find the name of the chord, because it depends on where you place the root (1) of the chord on the fretboard. In the free ebooks , you find plenty of movable chord shapes that will allow you to play the majority of songs . Click the button below to download it for free: Download The Chords Chart For Free When learning guitar chords, we have to deal with 2 different aspects: fingers flexibility and strength , and memorization . In the beginning, playing chords is not easy. There will be string buzzes or fingers that can't reach a fret. Here are some tips for helping you practicing your chords: Practice exercises for finger agility daily. It could be the classic 1-2-3-4 , or simply stretching. Even if it feels not easy, try to use the pinkie as much as possible , it will be helpful for more advanced fingerings. To press a fret, always try to use the tip of your finger . Ideally, you want your finger to be as much as possible perpendicular to the fretboard . Be sure to be proper warmed-up before stretching fingers Memorizing chord fingerings it's a mix of brain work and muscle exercise . We have to arrive at a point at which we don't need to think about where to place fingers, but automatically our left-hand knows where to go , and switching between chords becomes automatic. This is the so-called " muscle memory " and can be gained only with time and practice. Here's a small trick that will help you learn chords new shapes faster: Place your fingers on the fretboard in the chord fingering position Press a little bit more than needed Hold the position for 20 seconds. Release the force Pause for 10 seconds Press again for other 20 seconds. Do this for 5 times Your fingers will memorize the new chord in no time! Hope you'll find this guitar chords pdf useful, remember that you don't have to know hundreds of chord shapes to have fun with your guitar. Learn a couple of chords every day , apply them by playing your favorite songs, and soon you'll find yourself a true chord master!
